

DIY GRIPPING INSTRUCTIONS

ITEMS NEEDED

STEP 1

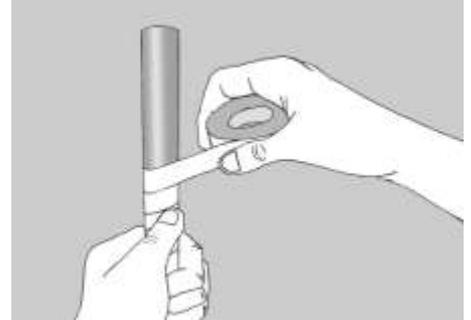

Place the golf shaft into the rubber shaft holder 10cm from the grip and gently tighten the vice to a strong hold.

Do not overtighten the clamp as it could damage or crack the shaft.

Pro Tip: If using a rubber vice clamp clip the rubber clamp on first than place into the vice.

It's optional to remove existing tape under the grip, however if necessary remove with a heat gun to reduce time.

STEP 2

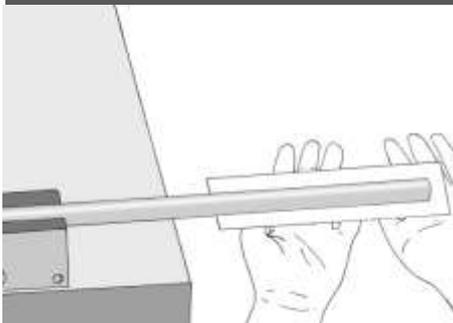

Thickening the grip with masking tape can be done straight over a bare shaft, over existing tape or over double sided tape.

Spiral the tape by wrapping vertically on the diagonal as shown above.

Pro Tip: Using 2 inch wide cloth or gaffer tape, will add 2-3 papers per wrap - this will speed the process and save you several minutes of regripping time per club.

STEP 3

Strip a 24cm piece of double-sided tape and place on the underside of the shaft, leaving a 1cm overhang at the butt end.

Gently smooth down the tape with your palm and tuck in the excess tape at the butt end.

This will help to ease the grip on and prevent splitting.

Pro Tip: Remember to remove all of the backing tape .

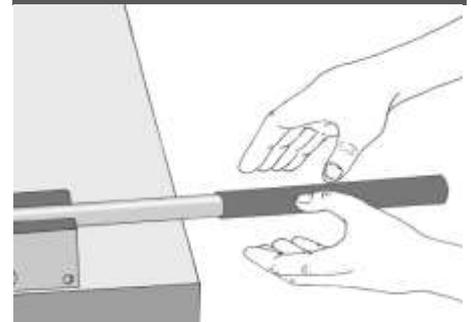

STEP 4

Take the new grip and plug the butt end with your thumb and pour solvent inside the grip. Shake well and pour excess solvent onto the taped portion of the shaft. Pinch the opening of the grip with your index finger and thumb (*diagram*), and slide/push the grip onto the shaft over the double side tape.

Pro Tip: Methylated/Turpentine spirits works well as a solvent. You can purchase it for around \$2-\$3 from any supermarket or hardware store.

STEP 5

Adjust the grip gently so that it's straight on the club, making sure any pattern on the grip is not twisted around the shaft and air bubbles are pushed out.

Pro Tip: By squeezing the grip firmly with your finger tips and pushing down along the grip, the user can stretch/thin out the grip if its too thick.

Let the grip dry for around 10 hours before using.

When using a utility knife, cut away from your body. If solvent gets into mouth, eyes or on skin, flush immediately with water and seek professional help. Solvent used is flammable and poisonous - Take extreme care!

TIPS

If you are having trouble with the solvent and double sided tape method, try using a contact adhesive from your local hardware store. Alternatively checkout our "How to Workshop" page @ mrgolfgrip.com.au for more hints & tips.
